SolPulse

The Micro-Bounty & Proof-of-Skill Platform on Solana.

We help builders instantly verify skills and judges instantly reward talent at the speed of Solana.

Gemini Notebook

Hackathons and Bounties are Broken for Both Sides

For Developers (The Waiting Game)

Work is completed over the weekend, but payouts take weeks to process through manual Web2 financial rails.

No verifiable, on-chain proof of the specific skills demonstrated.

For Judges (The Admin Nightmare)

Evaluating 100+ projects requires managing disjointed spreadsheets and executing manual wallet transfers one by one.

High friction in verifying actual code contributions versus team claims.

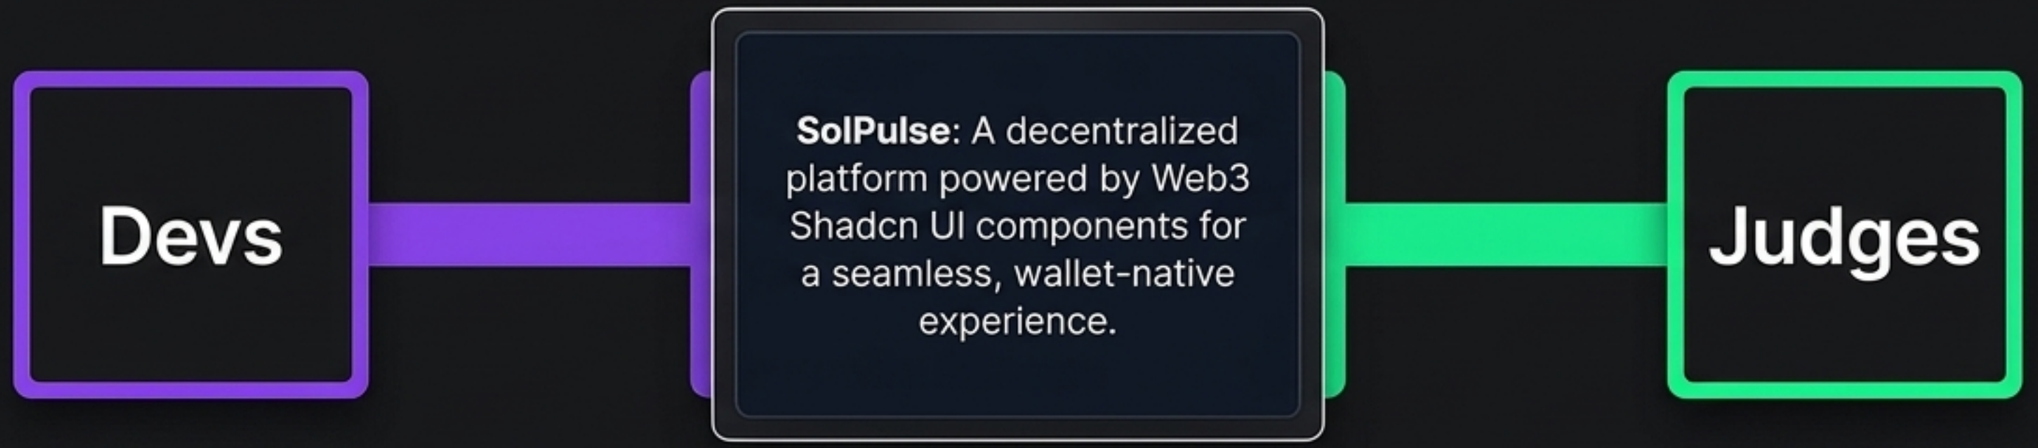

The Root Cause

Disjointed systems: GitHub, Discord, and Crypto Wallets do not talk to each other seamlessly.

The verification layer is completely disconnected from the settlement layer.

Gemini Notebook

SolPulse Binds Task Verification with Instant Payouts

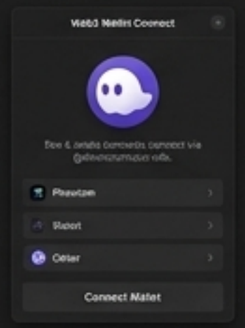

The verification layer and the settlement layer are now one unified Solana protocol.

Gemini Notebook

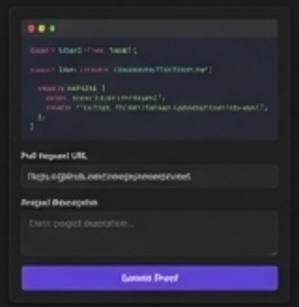

The SolPulse Prototype Journey

Step 1: Authenticate

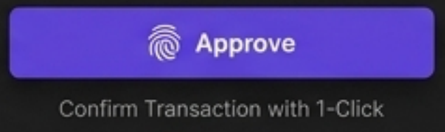

Dev & Judge connect via @phantom/react-sdk.

Step 2: Submit Proof-of-Skill

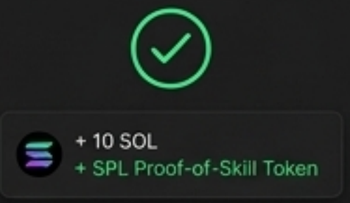

Dev submits GitHub PR or design link tied to a smart contract bounty.

Step 3: 1-Click Judge Approval

Judge reviews work and utilizes the Phantom useAutoConfirm hook for frictionless approval.

Step 4: Instant Settlement

Solana web3.js triggers the payout via Chainstack Global Nodes. Dev receives SOL & an SPL Proof-of-Skill token instantly.

Gemini Notebook

The Performance and Friction Matrix

	Traditional Platforms	SolPulse
Payout Speed	Weeks	✓ Sub-second via Solana
Judge Friction	Manual TX signing per team	✓ 1-Click Auto-Confirm Wallet
Reputation	Off-chain PDF resumes	✓ Immutable SPL Token Minting
Architecture	Siloed Web2 DBs	✓ Solana-Native Program

The 1-Click Judge Wallet

Utilizing Phantom's Injected Provider **useAutoConfirm** hook, judges can rapidly approve 50+ payouts in a row without signing individual pop-ups. Administrative friction drops to zero.

Gemini Notebook

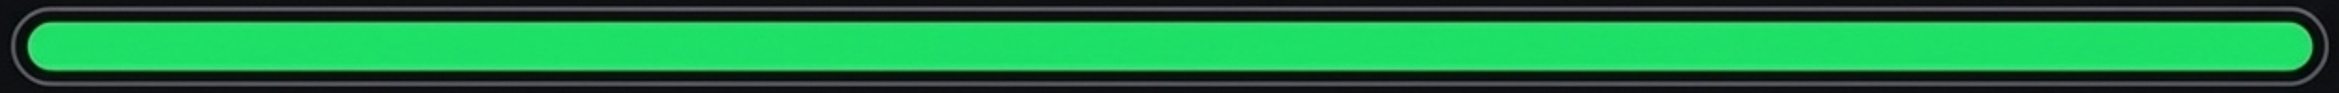

Engineered for Low Latency and High Trust

What We Executed in 48 Hours

48 Hours Total

Shipped Code

- Integrated Phantom React SDK Connect & UI Modals natively.
- Engineered the 1-Click Judge Wallet approval flow using Auto-Confirm hooks.
- Successfully executed web3.js Devnet SOL transfers routed through Chainstack RPC.
- Minted and distributed customized SPL tokens representing 'Proof of Skill'.

Tested Assumptions

- **Time Saved:** Judges save approximately 3 minutes per project evaluation by eliminating manual wallet transfers.
- **Onboarding:** Achieved zero-friction user onboarding by utilizing the embedded Phantom provider and Wallet Standard discovery.

Gemini Notebook

The Roadmap to Mainnet

Month 1

Mainnet deployment & comprehensive audit of the Escrow Smart Contract.

Month 2

Deep integration with GitHub Actions for automated, commit-based bounty validation.

Month 3

Pilot launch executing payouts for 3 major Solana ecosystem hackathons.

SolPulse doesn’t just fund builders; it builds on-chain resumes at the speed of Solana.
